1. Driver only. 2. Figures quoted based on New European Driving Cycle (NEDC) static laboratory combined average city and highway cycle test which measure energy consumption, range and emissions in passenger vehicles. Quoted figures are for the purpose of comparison amongst vehicles tested to the same technical procedures only. Actual real-world figures may significantly vary from quoted figures based on a combination of factors including but not limited to load, driving style, type of journey, vehicle configuration, battery age and condition, use of vehicle features (such as heating and air conditioning) as well as operating, environmental and climatic conditions. 3. Charging times will vary depending on a variety of factors including, but not limited to, the output of the charger being used, starting battery charge, charging equipment, ambient temperature, battery state as well as the age of the battery at point of use. As a result of these factors, charging times may therefore vary significantly. 4. Compatible Apple® or Android™ device required.
